

What is claimed is:

1. A tool comprising:

a drive gear comprising a hollowed interior portion,
including teeth disposed on an inner wall, the drive gear
5 comprising a drive member disposed on a bottom portion of
the drive gear, the drive member for applying a first
force;

an intermediate gear cooperating with the teeth
disposed inward, the intermediate gear having a fixed
10 position within the drive gear; and

a primary gear disposed within the drive gear,
cooperating with the intermediate gear, the primary gear
for receiving a second force less than the first force.

15 2. The tool of claim 1, wherein the primary gear is
located at a center of the drive gear.

3. The tool of claim 1, wherein the primary gear
comprises a socket exposed to an exterior of the drive
20 gear.

4. The tool of claim 1, wherein the drive gear further
comprises a removable top portion.

5. The tool of claim 1, wherein at least one of the primary gear, the intermediate gear, and the teeth of the drive gear are removable.

5 6. The tool of claim 1, wherein the primary gear, the intermediate gear, and the drive gear are arranged on a horizontal plane.
